Position Description: Software Engineer

Department: Engineering & Technology | **Employment Type:** Full-Time

Role Summary

We are seeking a talented, innovative, and driven **Software Engineer** to design, develop, and maintain high-performance software systems. In this role, you will collaborate with cross-functional teams to translate business requirements into scalable, secure, and robust technical solutions. You will be responsible for writing clean, maintainable code, optimizing application performance, and participating across the entire software development lifecycle.

Key Responsibilities

- **Architecture & Development:** Design, develop, test, and deploy production-ready applications, microservices, and APIs.
- **Code Quality:** Write clean, well-documented, testable code adhering to industry best practices and internal standard operating procedures.
- **Collaboration:** Work alongside product managers, UX/UI designers, and QA engineers in an Agile/Scrum framework to deliver high-impact features.
- **System Optimization:** Identify bottlenecks, debug production issues, and refactor codebases to ensure high availability and sub-second performance.
- **DevOps & Automation:** Build and maintain continuous integration and deployment (CI/CD) pipelines to automate shipping code safely.

Requirements & Qualifications

- **Education:** Bachelor's or Master's degree in Computer Science, Software Engineering, or a related technical field.
- **Experience:** 2-5 years of professional software development experience in an production enterprise environment.
- **Languages:** Technical proficiency in modern backend or frontend languages (e.g., Python, Java, TypeScript, Go, or C++).
- **Databases & Systems:** Hands-on experience with relational or non-relational databases (e.g., PostgreSQL, MongoDB, Redis).
- **Tools & Infrastructure:** Proficiency with Git version control, Docker containers, and cloud computing platforms (AWS, Azure, or GCP).

Core Competencies

Technical Excellence	Strong analytical skills with a deep understanding of data structures, algorithms, and system design patterns.
Problem Solving	Proven ability to diagnose complex root-cause application failures and implement permanent remediation.
Communication	Excellent verbal and written communication skills to articulate technical trade-offs to non-technical stakeholders.
